

BRINGING the VISION to LIFE

Full CEN EN 1789 certification from Vehicle Certification Agency

The **Profile** Ambulance Module

With a pedigree of over twenty years of ambulance production as one of Europe's largest manufacturers, Profile Vehicles Group presents our vision for the future, the Profile Ambulance Module.

With a stunning, safe, functional body that turns the idealism of the 'modular' concept into a reality, the Profile Module is truly the first vehicle to meet the modern demands of ambulance users.

Designed and comply to EN1789, our product features read as a 'best of the best' list from contemporary body designs on offer. We designed our vehicle with a determination and a pursuit of excellence that delivers true benefits in pre-hospital care vehicle operation to our customers.

The Profile Ambulance Module - we are 'bringing the vision to life'.

The Profile Ambulance Module main features

Aesthetically pleasing, independent remountable body for all major chassis types

The body has been designed to be as universal as possible. This means that operators can retain their choice of chassis without affecting the certification of the patient saloon. Even more impressive is the ability to remount the module to a different chassis - bridging the gap between PFI idealism and practical possibilities.

Durable, hygienic, ergonomic and safe 'Crew Friendly' interiors

With modern lightweight, tough materials, well radiused and upholstered fittings, the Profile interior reflects the needs of the highly skilled crew for a purpose designed working environment.

Short build times

With a bolt-together assembly, off-chassis build and core components, stocked at our manufacturing plant, lead times and build times are shortened dramatically. What's more with the universal nature of the Profile Module, build can commence of the module prior to a final decision being made on chassis type - decreasing the overall length of the vehicle purchase cycle considerably.

Mercedes-Benz Sprinter and Volkswagen LT.

Removeable panels and major components for simple and rapid repair

With a truly modular bolt together structure, the profile module is inherently strong whilst allowing major repairs to be completed in remarkably short timeframes. Panels susceptible to occasional 'traffic' damage are readily replaceable making de-fleeting for minor repairs unnecessary.

Effective Innovation

With features such as a universal subframe, versatile interior locker options and the 'IWS' next generation electrical system, the Profile Module is the most 'future proof' remountable body available. (A serious considerations when determining policy around a remountable body with an anticipated life span of 15 years.)
