## PROFILE // NEO

A great small ambulance

## Neo design

Profile Neo is extremely well suited to its purpose. It is packed with practical details in the places where you have always wished them to be.

### Ergonomic working space

You can reach the most essential equipment from your seat, with your three-point seat belt fastened. The paramedic's table is also more practical and versatile than ever before.

The asymmetric shape of the ceiling leaves the most space over the head. Free working space is provided also with the placement of the oxygen hoses, which hang down from the ceiling, thus remaining as out of the way as possible. The oxygen bottles are behind the left sliding door in the five-door model, and at the back of the patient-care compartment in the four-door model.

### A pleasant care environment

You can adjust the lighting in accordance with the situation. A pleasant blue trauma light and a soft indirect light that makes the patient feel more comfortable are standard features. Efficient fluorescent lights and spotlights are used as working lights. The patient compartment is equipped with efficient ventilation and automatic temperature adjustment.

### Improved electrical system

The intelligent electrical system takes care of an even larger number of routine procedures than before. New features include monitoring of the temperature and oxygen level of the incubator, stepless ventilation control, and outdoor temperature display. The DIN-sized operation panels save space in both the cabin and the care compartment.

### Elegant looks

The design of Profile Neo communicates modern and efficient care. An essential part of the ambulance's elegance is the integrated signal lights. If desired, a touch of luxury may be added with individual details.

We have combined the features of a large ambulance with a compact chassis. The result is Profile Neo, which our customers have helped to design.

Neo is economical, ergonomic, easy to wash, and as simple to drive as a passenger car. This nimble ambulance can enter small yards and narrow roads - going wherever someone needs your help.

## Neo cleanliness

Beauty has a purpose. Profile Neo is easier to keep clean.

## Neo safety

Profile Neo was born to rescue. The feeling of safety helps you to concentrate on your job in all situations.

### Easy to wash inside and out

Profile Neo lacks corners and crevices, which are difficult to wash. The floor is seamless and watertight, so it may be sluiced with plenty of water.

### Safe sitting and standing

Profile Neo was created for hectic situations. Rails in all the right places facilitate coming in and going out, and the floor coating prevents slipping.

You can be seated with your seat belt fastened and still reach both the patient and the most essential equipment.

## Neo agility

Profile Neo is at home on forest roads and in the alleys of a big city alike.

### Practical size

Profile Neo is a fine example of what ambulances were originally invented for: bringing help to the patient instead of bringing the patient to the helpers. The conveniently sized and nimble Profile Neo takes you to the patients, wherever they are.

### Practical upper cabinets

Items can be removed with ease from the upper cabinets. They can't fall on the patient, since the doors are hinged at the bottom. When open, the doors function as a table without blocking the light.

### Safety partition options

The partition is available with a manhole or a sash window.

Practical, comfortable work environment.

Rails.

All you need is within reach.

Upper cabinets.

PROFILE // NEO

## Neo ecology

Profile Neo burdens nature as little as possible, both in use and afterward.

### **Recyclability and fuel savings**

Profile Neo is environmentally friendly: recyclable materials have been used in several places. It also saves money, as the aerodynamic design reduces fuel consumption.

## Neo range for the Volkswagen Transporter chassis

### **Profile elevation (4-5 doors)**

Wheelbase: 3400 mm  
 External height: 2420 mm + load variation  
 External length: 5291 mm  
 External width with mirrors: 2242 mm  
 Internal height: 1785 mm  
 Internal width: 1377-1544 mm  
 Internal length: 2578 mm

Oxygen bottle locations.

Intelligent electrical system.

Integrated signal lights.

Storage space at the back.

## PROFILE //

### Two stripes at the front

The two stripes are a sign of uncompromising good work that combines the experience of paramedic professionals and top-quality Profile product development, design, and technological know-how. Genuine enthusiasm spurs us ever onward – to respond to the challenges encountered by our customers and to create entirely new solutions. This is how some of the world's best ambulances are created.
